

# CLASSIC DESIGN MEETS NEW TECHNOLOGY

## The Eames Molded Wood Side Chair

Advanced 3-D technology cuts wood veneer into small strips and processes them to make the wood flexible enough to mold without splitting or popping. The material can take on the authentic form of the timeless Eames design as a single wood shell. Available in three wood finish options (white ash, walnut, and santos palisander) and three bases (wire (or “Eiffel Tower”), dowel leg, and 4-leg).

## The Design

In all they created and explored, Charles and Ray Eames emphasized quality, excellence, and the continual improvement of their products. This philosophy produced thoughtful refinements to their designs as technology, materials, and environmental understanding evolved over time.

A beautiful expression of the timeless design, the Eames Molded Wood Side Chair honors the organic shapes, sleek lines, and honest materials of Charles and Ray’s classic work – and represents Herman Miller’s longstanding commitment to the Eames vision of continued exploration.
